

Nine little planets

<https://riverofsong.uk/>

Learn the number, names and order of the planets in our solar system. Since the 1930s when Pluto was discovered children learnt there were nine planets; in 2006, however, Pluto was reassigned as a dwarf planet so there are now only eight 'proper' ones. Update: Astronomers are now surmising there is indeed a ninth planet, 'Planet Nine', in the outer reaches of our solar system.

One lit - tle, two lit - tle, three lit - tle plan - ets, Four lit - tle, five lit - tle,
six lit - tle plan - ets Se - ven lit - tle, eight lit - tle,
nine lit - tle plan - ets, Or - bit - ing round the sun.

One little, two little, three little planets,
Four little, five little, six little planets,
Seven little, eight little, nine little planets
Orbiting round the sun.

Mercury is nearest and then comes Venus,
Earth, Mars, Jupiter, Saturn, Uranus,
Neptune's next, little Pluto's the furthest,
Orbiting round the sun.

Go outside and look at the night sky,
See each planet shining brightly,
Big ones, small ones, spinning and twinkling,
Orbiting round the sun.
