Ocean alert! The oceans cover 70% of our planet! We need our oceans, and they need us; it is time for wise words, common sense, and renewed sanity. This year's droughts and difficult weather are said to be rooted in the state of the world's oceans; the way we treat our seas can significantly affect weather patterns. It also affects whether it is safe to swim in their waters—and more importantly whether countless aquatic creatures can survive there at all - 94% of Earth's living species exist within the oceans! Set to music and words by Dany Rosevear

What are the earth-friendly choices we can make for our oceans?

Chorus: Line 1. Roll arms back and forth. 2. Press hands to heart. 3. Put hands to mouth like a megaphone. Throw arms up! 4. Palms together and wiggle them.

How mighty is the call of the oceans, How restless the song of the seas, Great waves roll and roar to implore us, Hear their urgent and powerful pleas. *Chorus:* Bring back, oh, bring back, Bring back the clean waters we need, we need, Wake up! Rise up! Be thoughtful, be caring, help our sea life swim free.

How mighty is the call of the oceans,
How restless the song of the seas,
Great waves roll and roar to implore us,
Hear their urgent and powerful pleas.

Chorus:

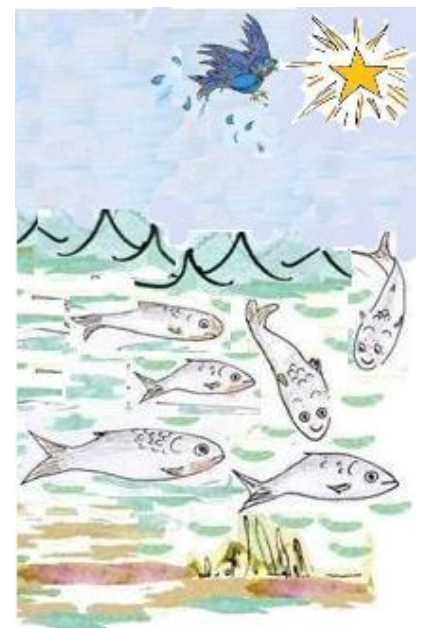

*Bring back, oh, bring back,
Bring back the clean waters we need, we need,
Wake up! Rise up!
Be thoughtful, be caring, help our sea life swim free.*

The oceans can bring us together,
Earth's highways flow by endlessly;
They carry the goods that sustain us,
Through the wild winds and deep rolling seas .

There's sewage and there's plastic pollution,
Down rivers spilling out to the sea;
For your own sake make earth-friendly choices.
For you know what our blue planet needs.

The oceans are growing much warmer,
As sea levels rise in distress;
Consider their health and wellbeing,
Treat them kindly then they'll do the rest!

May our oceans be with us forever,
May our seas provide many a good home;
In the coral reefs, marshes and mangroves,
Where little fish and earth's creatures can roam.
